

# DRY BACK 2mm - 3mm INSTALLATION

# RECOMMENDED INSTALLATION INSTRUCTIONS

# **Dryback 2mm-3mm Products**

## **Before Installation**

- The surface must be completely dry.
   Please note that even though the
   floor may appear dry, it may still
   retain moisture. Moisture testing is a
   mandatory step in subfloor preparations.
- 2. In newly constructed building it is necessary to dry the flooring surface 7 to 14 days prior to application to ensure that no moisture is retained in cement surfaces. Moistures must be less than 4.5%
- 3. Any polish, paint, dirt, etc. must be completely removed from the floor before installation. Dry mop and sweep the entire floor to remove surface sand, soil and debris.
- 4. Ensure that the floor surface is smooth and level. To achieve an ideal smooth and even subfloor surface there should be no more than a 2mm difference in height over any 2000mm distance, and no more than a 1mm difference over any 1500mm distance.
- 5. Maintain the room temperature above 15-26°c) before installation. Adhesive and flooring products must be kept in the same environment for at least 24 hours before use

### **Installation**

- 1. Prepare all rulers, cutters, adhesives, spreaders and compass dividers before begin to work.
- 2. Check that the colour is as selected.
  Once installed NFD is not responsible for colour/dye or colour inconsistencies.
  Check that the boxes of planks are of the same batch/lot number.
- 3. Find the exact center of the floor by marking vertical and horizontal lines across the floor.
- 4. Measure the squareness of the marked lines, and then start applying adhesives on the first quarter of the marked floor space.
- 5. Work on small portions of the floor at a time, and apply adhesives accordingly. Optimum usage of adhesive is 1 litre to cover 5m2 using a 1.5 v notch trowel.
- 6. Keep a distance of 1mm from the wall and the edge of the flooring products. Press products down firmly so that the products lie flat on the ground. Use a roller at least 45kg to roll over the planks to apply extra pressure. Planks must be installed while adhesive is still wet ensuring sufficient transfer after rolling.
- 7. As the adhesives are highly flammable, avoid any contract with sparks or open flames.
- 8. As the adhesives dry quickly, remove excess adhesive immediately by using alcohol or alkali water.
